

These are the following graphs obtained for system throughput, Message complexity and Runtime by varying Number of nodes, Cs Execution time, Inter request delay.

Number of Nodes:

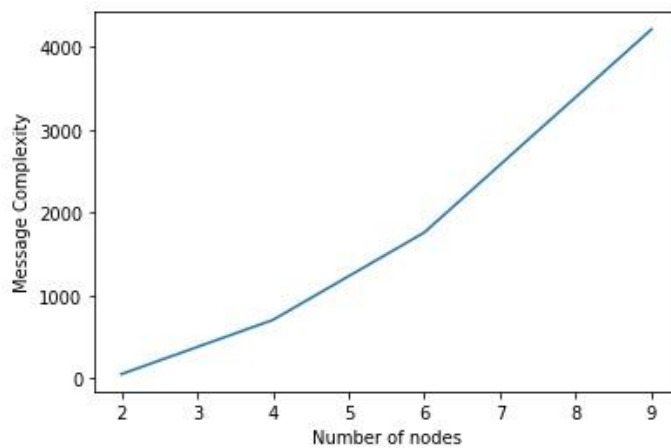

Throughput: (Decreases with n)

Runtime: (increases with n)

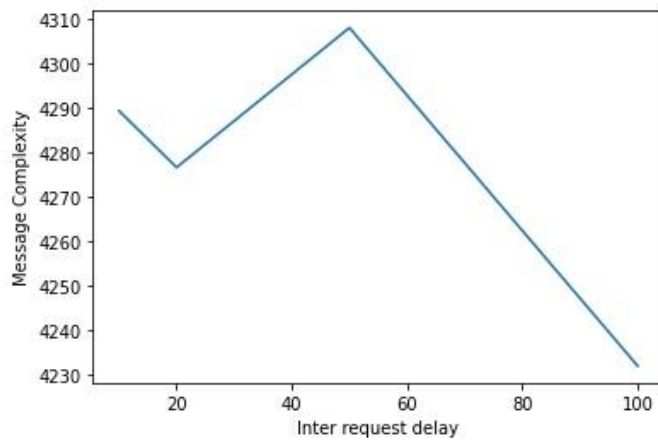

Message Complexity: (increases with n)

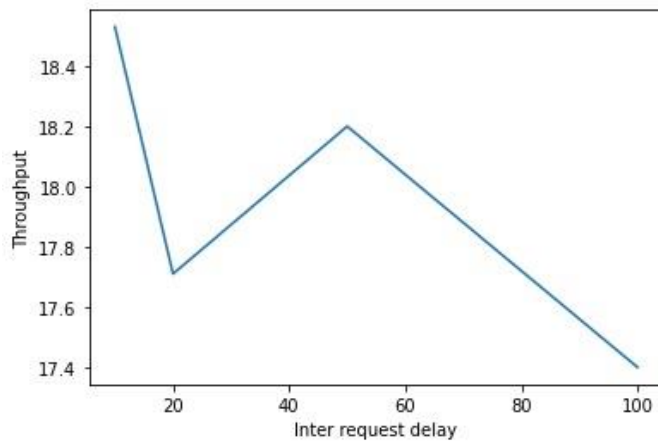

Inter-request Delay:

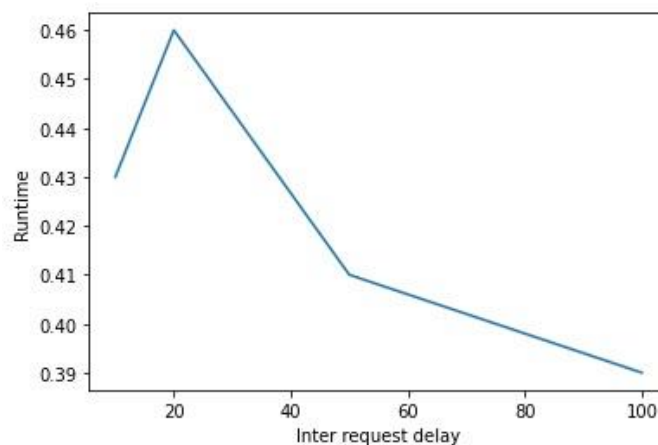

Message Complexity: (Remains more or less the same)

Throughput: (Remains more or less the same, with slight downward trend)

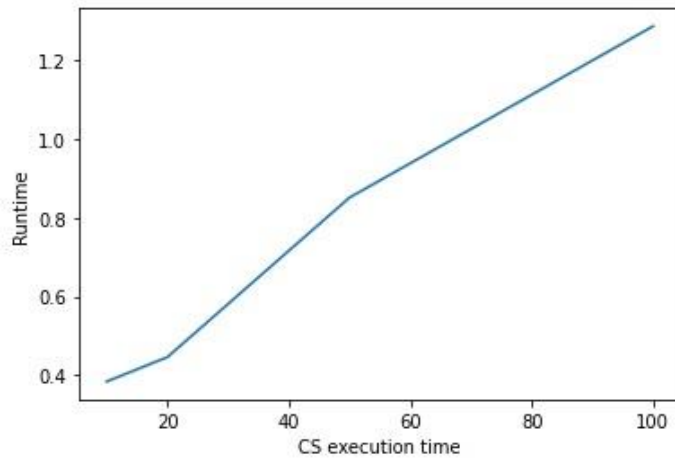

Runtime: (Remains more or less the same, with a slight downward trend)

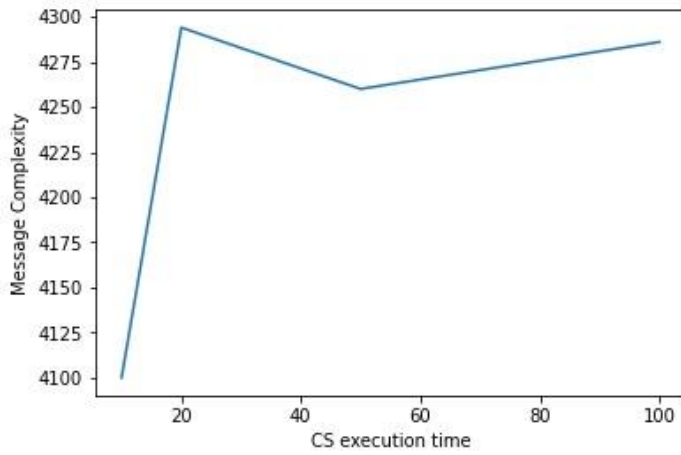

CS Execution Time:

Runtime: (Increases with CSE Time)

Message Complexity: (Remains more or less the same)

Throughput: (Decreases with increase in CSE Time)
